

PASSIONE STRAORDINARIA

Directives 2011/65/UE and 2015/863/UE (RoHS)

The a/m European Directives refer to the ban and restrictions on the use of certain substances in electric and electronic equipment (RoHS)

The chemical analysis of the metals commonly used for our production show Lead as the only substance listed by the mentioned directive, as alloying element in Brass, Aluminium and Steel. According to Annex III this is allowed:

- Exemption 6a - in Steel Alloy $\leq 0.35\%$
- Exemption 6b - in Aluminium Alloy $\leq 0.40\%$
- Exemption 6c - in Copper Alloy $\leq 4.00\%$

In fact, the analysis confirms that all materials used in our production show a Lead percentage, which is far below these limits.

Also, as far as plastic raw materials are concerned, our products respect the limits stated by the same directives and namely:

- Phtalate di bis(2-etilesile) (DEHP) (0,1 %)
- Benzyl butyl phtalate (BBP) (0,1 %)
- Dibutyl phtalate (DBP) (0,1 %)
- Diisobutyl phtalate (DIBP) (0,1 %)

We can therefore state that all our products - with the stated exceptions - do respect the limitations stated by the above-mentioned Directive
